MICHIGAN CREDIT UNION KEY DEVELOPMENTS

Although U.S. economic growth slowed marginally in the third quarter of 2018, consumers remained upbeat and engaged. Healthy labor markets fueled personal income gains, boosting confidence, translating into solid increases in retail sales and housing purchases. Equity markets registered a 7% advance in the three months ending September. Against this backdrop, the Federal Reserve remained cautious increasing the federal funds benchmark interest rate only once in the quarter – by 25 basis points. That was a favorable operating environment for U.S. credit unions and was generally reflected in Michigan's credit union results with strong membership and loan growth and healthy (and higher) earnings.

- Michigan credit unions report a 1.6% increase in total memberships in the third quarter of 2018 and a 3.2% increase in the year ending September 2018. The 12-month gain—though a bit slower than the 4.6% second quarter gain. The strongest growth came from new auto loans, which showed a three-month gain of 5.0% (20% annualized). Loan growth in the year ending September 2018 came in at 11.4%, slightly lower than the 11.6% loan growth for full-year 2017.
- While loans were growing in the third quarter, savings balances were headed in the opposite direction, declining by 1.2% in the period. The slide followed a healthy 1.1% increase in the second quarter of 2018. Certificates were the only portfolio that grew, though the increase was a solid 3.2% gain reflecting more off-term specials and step-up offerings designed to staunch the flow of funds into money market accounts and lock in longer-term funding at relatively low yields.
- With loan growth outpacing savings growth, the state's aggregate credit union loan-to-savings ratio increased from 78.7% to 82.2% from the second quarter of 2018 to the third quarter of 2018.
- Asset quality dipped slightly in the third quarter. Delinquency rates increased slightly from 0.63% at the end of the second quarter of 2018 to 0.68% at the end of the third quarter. The Michigan credit union net charge off rate increased from 0.45% in the second quarter of 2018 to 0.50% in the third quarter of 2018.
- The combination of solid loan growth and the NCUSIF equity distribution pushed earnings higher. The state's credit unions reported annualized ROA (net income as a percentage of average assets) of 1.16% in the third quarter – up from 1.02% in the second quarter.
- Slow asset growth and higher earnings pushed the Michigan credit union capital ratio up from 11.7% at the start of the third quarter to 12.0% by the end of September. All but two of the state's 224 credit unions are well capitalized with net worth ratios above the 7.0% regulatory threshold level.

Overview by Year

Earnings, net chargeoffs, and bankruptcies are year-to-date numbers annualized. Due to significant seasonal variation, balance sheet growth rates are for the trailing 12 months. US Totals include only credit unions that are released on the NCUA 5300 Call Report file.

Source: NCUA and CUNA E&S.

Executive Summary

The U.S. economy grew 3.5% in the third quarter of 2018, below second-quarter growth but a strong pace of expansion nonetheless. The six-month period from April to September was the fastest six-months of economic growth in four years and puts the economy on track to expand over 3% annually in 2018. Labor markets remain strong, with unemployment at a near 50-year low of 3.7%. Inflation is near the Fed's target of 2.0%, which means that the

Federal Open Market Committee (FOMC) is likely to raise interest rates to a range of 2.25% to 2.50% by the end of 2018. That would be the highest Fed Funds Rate since 2008. While credit unions continue to grow at a fast pace, increasing rates are starting to decrease demand for first and second mortgages, and credit unions should expect slower loan and membership growth in coming cycles.

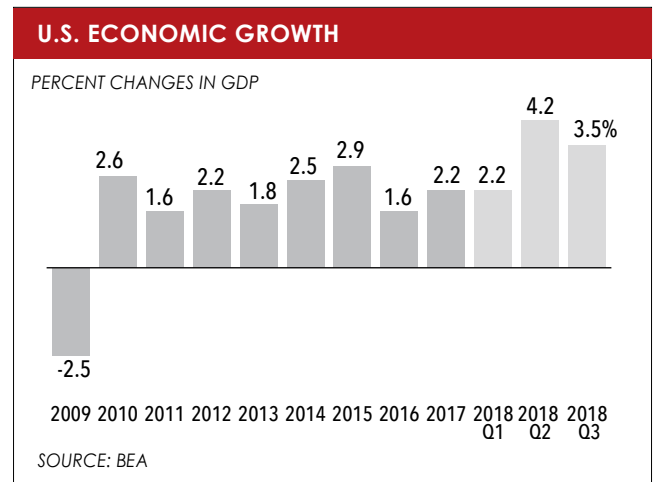

RECENT ECONOMIC DEVELOPMENTS

Economic Growth & Gross Domestic Product (GDP)

- The Bureau of Economic Analysis (BEA) reports that real gross domestic product (GDP) grew 3.5% in the third quarter of 2018. This follows growth of 4.2% in the second quarter and 2.2% in the first quarter and puts annual growth on target to grow at a rate of 3.3% if it continues to expand at this pace. However, most economists predict slower GDP growth of about 2.5% in the fourth quarter, but that would still put annual growth at over 3.0% (3.1%) for the year. If that happened, it would be the first time annual economic growth surpassed 3% since before the recent financial crisis.
- While personal consumption remained strong, the third quarter witnessed a significant decline in exports. This is at least partially due to increased Chinese tariffs that have reduced exports of certain sectors, such as soybeans. Business spending was also slow and residential investment declined for the third straight month, indicating that the boost from recent tax cuts may be fading and rising interest rates are harming the housing market. However, imports grew at a fast pace, reflecting a rush by businesses to stockpile before U.S. import duties come into effect late in the third quarter.
- The outlook for economic growth going forward is less sanguine. The most recent Wall Street Journal of economists has GDP growth falling to 2.6% in the fourth quarter and to 2.3% next year, before falling even further to 1.8% in 2020. The National Association of Business Economists' (NABE) survey is slightly more optimistic, with surveyed business economists predicting 2.7% growth in 2019. However, the panelists put the odds of a recession by the end of 2020 at 30%. Interestingly, business leaders themselves are considerably more pessimistic. A recent Duke survey of CFOs found that nearly half (48.6%) believe we will enter a recession by the end of 2019, and 82.0% believe a recession will occur by 2020. CUNA economists predict economic growth to slow to 2.25% in 2019; we also expect growth to slow even further in 2020, but we do not predict a recession at this time.

U.S. GDP GROWTH				
Annualized Quarterly Change (%)	4Q17	1Q18	2Q18	3Q18
Real Gross Domestic Product	2.3	2.2	4.2	3.5
Personal Consumption	3.9	0.5	3.8	3.6
Durable Goods	12.7	-2.0	8.6	3.9
Private Domestic Investment	0.8	9.6	-0.5	15.1
Residential	11.1	-3.4	-1.3	-2.6
Net Exports				
Exports	6.6	3.6	9.3	-4.4
Imports	11.8	3.0	-0.6	9.2
Government Expenditures	2.4	1.5	2.5	2.6

- Credit unions continue to benefit from the robust economic recovery and strong labor markets. The third-quarter CUNA U.S. Credit Union Profile shows that year-over-year membership growth reached 4.4% as of September 2018. If memberships continue to grow at this pace, it would represent the fastest annual membership growth since the 1980s. The rapid growth in members may be at least partly due to consumers searching for lower interest rates in a rising rate environment. Year-over-year loan growth and asset growth were also strong, at 9.3% and 5.6%, respectively; however, while strong, these rates of growth are the slowest since 2013. With rising interest rates, CUNA economists expect loan growth to fall slightly to 9.5% by year-end 2018, and to 8.0% by the end of 2019. This follows four years of double-digit credit union loan growth that was fueled by the economic recovery and very low interest rates.

Employment and the Labor Market

- According to the U.S. Bureau of Labor Statistics, the economy added 119,000 jobs in September, 286,000 in August and 165,000 in July, for an average of 190,000 per month. This represents very robust job growth and has brought the unemployment rate down to 3.7%, the lowest level since 1969. Moreover, there are approximately 7 million open jobs and about 6 million people looking for work; this means that job openings exceed the number of people looking for work by about 1 million. That represents the highest that job openings have surpassed job seekers since the figures started being recorded in 2001.
- Nonetheless, despite such a strong labor market, wage growth remains slow. Economists would expect wages to increase sharply as employers must compete to attract and retain workers. However, nominal wage growth is only up 2.9% over the past year, well below the average 4.2% increase right before the 2001 recession. And with inflation at about 2.0%, real wage growth (which adjusts for inflation) is below 1.0%. Economists have proposed a number of theories for why wage growth remains tepid, including demographic shifts, slow productivity growth, new technologies, and reduced bargaining power among workers due to fewer unions. However, with such low unemployment and fast job growth, wages are likely to increase at a quicker pace in coming cycles.
- Michigan's unemployment rate remains higher than the national average. The Bureau of Labor Statistics (BLS) reports that Michigan's average unemployment rate for the third quarter of 2018 was 4.1% as compared to the national average of 3.8%. Michigan's unemployment rate fell to 3.9% in October. This is the first time since October 2000 that it has been this low. Not surprising, given the tightened labor market, average hourly nominal private sector wages increased 1.5% in the third quarter of 2018 from \$25.52 in July to \$25.91 in September.

- According to the BLS, Michigan added 8,300 nonfarm jobs for a total of 4,438,000 nonfarm positions in September. Employment growth between September 2017 and September 2018 was led by the following sectors: Construction 11,000 jobs, Manufacturing 10,000 jobs, Trade, Transportation, and Utilities 6,700 jobs, Professional and Business Services 8,800 jobs, and Leisure and Hospitality 8,200 jobs.
- Unemployment has decreased in every major metropolitan area in Michigan over the past year. In September, unemployment in Michigan registered 3.9% just above the national average (3.7%). Unemployment is lower than the national average in the following eleven areas: Ann Arbor (2.8%), Battle Creek (3.6%), Grand Rapids-Wyoming (2.6%), Jackson (3.4%), Kalamazoo-Portage (3.2%), Lansing-East Lansing (2.9%), Midland (3.2%), Monroe (3.6%), and Niles-Benton Harbor (3.6%). The highest rates of unemployment in Michigan are found in Flint (4.0%), Muskegon (3.9%), and Saginaw (3.9%).

Prices and Inflation

- Inflation remains right around the Fed's target of 2.0%. CPI headline inflation registered at 2.5% as of October, while core CPI inflation—which excludes volatile food and energy prices—came in at 2.2%. The Fed's preferred measure of inflation, the personal consumption expenditures (PCE) index, was up exactly 2.0% from a year ago. As inflation remains on target and unemployment stays low, the Federal Open Market Committee (FOMC) is likely to continue with its planned rate increase of 0.25% in December 2018, which would bring the Fed Funds Rate to a range of 2.25% to 2.50%. That would be the highest rate since 2008.

MICHIGAN UNEMPLOYMENT RATE TRENDS — BY MSA			
Metropolitan Area	September 2018 (%)	September 2017 (%)	Change (%)
Ann Arbor, MI	2.8	3.9	-1.1
Battle Creek, MI	3.6	4.8	-1.2
Bay City, MI	3.7	4.9	-1.2
Detroit-Warren-Dearborn, MI	3.7	4.6	-0.9
Flint, MI	4.0	5.4	-1.4
Grand Rapids-Wyoming, MI	2.6	3.5	-0.9
Jackson, MI	3.4	4.4	-1.0
Kalamazoo-Portage, MI	3.2	4.3	-1.1
Lansing-East Lansing, MI	2.9	4.2	-1.3
Midland, MI	3.2	4.3	-1.1
Monroe, MI	3.6	5.5	-1.9
Muskegon, MI	3.9	5.2	-1.3
Niles-Benton Harbor, MI	3.6	4.5	-0.9
Saginaw, MI	3.9	5.1	-1.2

SOURCE: BLS. NOT SEASONALLY ADJUSTED.

Housing

- Rising interest rates appear to be influencing the demand for homes and mortgages. The average 30-year fixed mortgage rate reached 4.72% at the end of the third quarter, up from 3.83% just a year prior. According to the National Association of Realtors, existing-home sales declined for the sixth-straight month in September and fell to the lowest-level in nearly three years. Total sales were 4.1% below the September 2017 rate.
- Rising interest rates, limited inventory and increased building costs have made housing significantly more expensive for new home buyers. Despite the slow-down in demand, the median existing-home price in September was \$258,100, up 4.2% from

September 2017, and the 79th straight month of year-over-year gains in existing home prices. This has led to properties staying on the market for longer, as the typical property is now on the market for 32 days, up from 29 days in August.

- New home sales dropped 5.5% in September to a near two-year low; however, the median sales price of new homes fell from \$331,500 a year ago to \$320,000, as of September 2018. There were a total of 327,000 new homes on the market in September, the most since January 2009 and up 2.8% from August. However, supply is just over half of what it was at the peak of the housing market boom in 2006.
- Based on data from the NCUA, first mortgages at credit unions are up 9.8% over the past year; this represents strong growth in first mortgages, but it is slower than the 10.1% growth in 2017. HELOCs and second mortgages are up 6.5% over the past year, just slightly below the 7.0% figure in 2017. The strong growth in first and second mortgages has been fueled by a robust economy, strong labor market, rising home values and historically low interest rates, and the recent growth may reflect consumers attempting to lock in rates that are still very low by historical standards. However, as rates rise, we expect mortgage growth to taper off over the next year.
- Following national trends, over the previous 12 months every major metropolitan area in Michigan saw increased home prices. The largest home price increases were in Ann Arbor (8.0%), Detroit-Dearborn-Livonia (9.2%), Jackson (7.9%), Muskegon (8.0%), Niles-Benton Harbor (8.4%), and Warren-Troy-Farmington Hills (7.9%). Only the Bay City metro area continues to have a gap (-2.7%) between pre-recession prices and third quarter 2018 values. Home prices in all other metro areas are above their pre-recession levels: Ann Arbor (33.6%), Battle Creek (5.4%), Detroit-Dearborn-Livonia (12.7%), Flint (8.7%), Grand Rapids-Wyoming (33.5%), Jackson (8.5%), Kalamazoo-Portage (18.7%), Lansing-East Lansing (6.2%), Midland (3.8%), Monroe (8.8%), Muskegon (18.0%), Niles-Benton Harbor (10.3%), Saginaw (0.6%), South Bend-Mishawaka (17.8%), and Warren-Troy-Farmington Hills (20.8%).

MICHIGAN HOME PRICE CHANGES— BY MSA

Metropolitan Area	Year Ending 3rd Qtr 2018	Since 4th Quarter 2007
Ann Arbor, MI	8.0%	33.6%

Financial Markets & Interest Rates

- As of October 1st, 2018, the yield on the ten-year U.S. Treasury had reached 3.09%, up from 2.85% at the end of the second quarter, and up from 2.31% a year ago. The rising Treasury rate reflects a number of factors, including rising inflation and the increasing Fed Funds Rate. However, greater volatility in the stock market and growing uncertainty about future events—such as Brexit, the stand-off on tariffs between the U.S. and China, and slower growth in emerging markets—puts downward pressure on Treasury yields, as more people invest in U.S. bonds when there is a greater perceived risk about future events or lower expected returns in the stock market.

- Volatility in the stock market has been particularly high of late, and the long nine-year bull market appears to have sputtered out. After reaching a high of 2,930 in September, the S&P 500 has since fallen approximately 10% to about 2,630. Moreover, the stock market seems to have returned to its old level of volatility; whereas last year the S&P 500 only had 8 sessions with a 1% change in value (or more), so far in 2018 the S&P has moved by 1% or more on 56 days (as of December 12th). However, while it may seem turbulent, this volatility is quite normal; in an average year, the S&P moves by 1% or more on 52 days. The last few years have simply been an exception with relatively gradual, upward movement, and few major swings in stock value.
- Economists generally expect the FOMC to raise interest rates another 0.25% this December, which would bring the Fed Funds Rate to a range of 2.25% to 2.50%, the highest level since 2008. However, there is less agreement about what the Fed will do next year, with economists forecasting anywhere from one to four 0.25% rate-hikes. There is also disagreement about what the “neutral” interest rate is, the rate at which the Fed Funds Rate neither encourages nor detracts from economic growth. Estimates range from about 3.0% to as much as 5.0%, so it is somewhat unclear when the Fed will stop raising interest rates, even if the economy continues to perform well. The Wall Street Journal survey of economists shows that the median forecast for 2019 fell from three rate hikes to two, which would bring the range to 2.75% to 3.00% by the end of 2019. The NABE business economists express a similar sentiment, with the average forecasted Fed Funds Rate reaching 2.94% by the end of 2019. CUNA economists also expect an effective Fed Funds Rate in this range; however, much depends on how the economy performs. If the economy does particularly well and inflation remains under control, there may be fewer rate hikes; whereas, if the economy continues to perform and inflation takes off, the Fed could enact as many as three to four rate hikes, potentially bringing the Fed Funds Rate as high as 3.25% to 3.50% by the end of 2019.

CREDIT UNION RESULTS

- Although U.S. economic growth slowed marginally in the third quarter of 2018, consumers remained upbeat and engaged. Healthy labor markets fueled personal income gains, boosting confidence, and translating into solid increases in retail sales and housing purchases. Equity markets registered a 7% advance in the three months ending September 2018. Against this backdrop, the Federal Reserve remained cautious, increasing the federal funds benchmark interest rate only once in the quarter – by 25 basis points. That was a favorable operating environment for U.S. credit unions and was generally reflected in Michigan’s credit union results with strong membership and loan growth and healthy (and higher) earnings.

Growth

- Michigan credit unions report a 1.6% increase in total memberships in the third quarter of 2018. Memberships in Michigan credit unions increased by 3.2% for the year ending September 2018. That’s a bit slower than the 3.5% full-year 2017 advance, but well above the state’s 0.2% annual population growth rate. Michigan credit unions report a total of 5.4 million memberships.

- Nationally, memberships increased by 1.3% in the third quarter – marginally slower than the Michigan advance, but faster than our expectations. Increases continue to outpace population gains by a wide margin.
- The state's not-for-profit financial cooperatives experienced 3.1% loan portfolio growth in the third quarter of 2018 —a solid 12.4% annualized pace— but a bit slower than the 4.6% second quarter gain. Loan growth in the year ending September 2018 came in at 11.4%, slightly lower than the 11.6% loan growth for full-year 2017.
- New auto loan balances grew at a 5.0% clip in the third quarter, outpacing healthy gains in each of the other broad loan categories we track. Unsecured personal loans followed closely, with a 3.8% increase, and used autos and credit cards were up 3.2% and 3.1%, respectively. HEL/2nd mortgages nearly eclipsed the 3.0% mark, but settled in at a 2.9% advance. First mortgages were up 2.7% and commercial loans were up 2.4% in the three-month period.
- In the year ending September 2018, commercial loans grew fastest reflecting a 23.1% increase. However, new autos grew nearly as fast with a 19.7% gain. Only two other portfolios reflected double digit gains: first mortgages were up 12.7% and used autos increased 10.8% in the 12-month period.
- While loans were growing in the third quarter, savings balances were headed in the opposite direction, declining by 1.2% in the period. The slide followed a healthy 1.1% increase in the second quarter of 2018. Certificates were the only portfolio that grew and the increase was a solid 3.2% gain reflecting more off-term specials and step-up offerings designed to staunch the flow of funds into money market accounts and lock in longer-term funding at relatively low yields. Share drafts declined by 3.5% and regular shares fell 2.6%. Declines in money market shares and IRAs were less pronounced – though the respective 1.1% and 0.5% both reflected weaker results compared to the second and year-ago quarters. Overall, Michigan credit union savings balances were up a modest 4.7% in the year ending September 2018. Certificates gained the most, increasing by 11.2% in the year.

Risk Exposure

- Asset quality dipped slightly in the third quarter. Delinquency rates increased slightly from 0.63% at the end of the second quarter of 2018 to 0.68% at the end of the third quarter. The Michigan credit union net charge off rate increased from 0.45% in the second quarter of 2018 to 0.50% in the third quarter of 2018. Expectations for slower loan growth and for gradually rising interest rates, which make payments higher for variable rate loans, may pose more obvious challenges to asset quality in the months ahead.

- With loan growth outpacing savings growth, the state's aggregate credit union loan-to-savings ratio increased from 78.7% to 82.2% from the second quarter of 2018 to the third quarter of 2018.
- The Michigan aggregate loan-to-savings ratio is ten percentage points higher than the level we reported in 2015 and sits at its highest reading in modern history. While most credit unions reflect ample liquidity in the current environment, this trend is likely to receive increased exam and supervisory attention going forward. As market interest rates drift up there will undoubtedly be more pressure to raise deposit yields to slow additional outflows into money market mutual funds.
- Michigan credit unions net long term assets held steady, inching up from 37.8% at mid-year to 37.9% of total assets at the end of the third quarter. That reading remains a bit higher than the 33.0% national average, but down from the state's 38.0% reading at the start of the year. It also is below the Michigan 41.9% cyclical high reported at the end of 2013. Overall, institutions in the Great Lakes state appear ready for higher interest rates and don't reflect outsized exposure to interest rate risk.

Earnings Results

- The combination of solid loan growth and the NCUSIF equity distribution pushed earnings higher. The state's credit unions reported annualized ROA (net income as a percentage of average assets) of 1.16% in the third quarter – up from 1.02% in the second quarter. Aggregate annualized earnings over the first three quarters totaled 1.08% - up from 0.90% in full-year 2017.
- The notable earnings increase in 2018 primarily arose from higher asset yields than those reported in 2017, though higher noninterest income also contributed. However, a six basis point increase in operating expenses and a one basis point increase in loss provisions reduced the increase in bottom-line results by about one-third.
- Earnings rates continue to vary substantially by credit union asset size. Michigan credit union annualized ROA ranged from a low of 0.61% at the state's smallest institutions (i.e., those with \$20 million or less in total assets) to a high of 1.28% at the state's twelve credit unions with \$1 billion or more in total assets.
- Looking forward, we expect a continuation of healthy membership growth and solid loan portfolio growth in the fourth quarter and into 2019– even if short-term interest rates drift a bit higher. Holiday

SOURCE: NCUA AND CUNA

spending and borrowing should come in at (or near) a post-recession high before first quarter seasonal softening as people pay-down holiday debts. A generally favorable lending environment should prevail throughout 2019 – though portfolio increases are likely to moderate going forward. We are, of course, mindful of the challenges represented by rising geopolitical risks, the danger of escalating trade disputes and increasing stock market volatility. But strong labor markets, rising incomes and low energy prices each should help to buoy overall economic results.

U.S. CU DIVIDEND & INTEREST COST OF ASSETS HAVEN'T FOLLOWED MARKET RATE INCREASES UP

- From an operational perspective a few things of concern stand out. First, there is a real danger of more obvious interest margin pressures going forward. The combination of rising interest rates and tight liquidity could be troublesome. Today, 20% of credit unions holding half of credit union assets report loan-to-share ratios of 90% or higher. Money market mutual fund yields are close to 2.00% and will undoubtedly follow market interest rates higher in lock-step fashion. Attracting more (and more expensive) deposit balances going forward may have many feeling the pinch.
- Second, there will likely be more obvious pressure on non-interest margins. Higher market interest rates present more consumers with an affordability issue when shopping for mortgage financing. This pushes many into lower-rate adjustable financing. The resulting decline in longer-term, fixed rate mortgage originations will likely mean substantially lower gains on sales as credit unions sell fewer fixed-rate paper into the secondary market.
- Moreover, in a recent development the popular press has focused a bright light on financial institution overdraft protection and NSF pricing and practices. A New York Times article recently cited one example of a lower-income credit union member who incurred fees totaling \$2,000 in a 12-month period – many of which were related to overdraft protection. Soon after, Moebs financial, a consultancy, reported that credit union members pay \$12.90 per month on average in service charges on checking accounts, compared to \$8.95 a month at banks and only \$3.52 per month at thrifts. The data included account maintenance fees, minimum balance fees, overdrafts, ATM charges and other regular service fees; it did not include debit card swipe fees.
- Talent management and related costs will likely be another more obvious issue in the coming months. Credit union turnover has been steadily increasing over the past several years and average turnover rates on the front line are hovering around 20%. With a national 3.7% unemployment rate and more job openings than unemployed people, differentiating to attract and retain staff will become more important and more expensive – putting additional pressure on operating expense ratios.
- Notwithstanding these challenges, economic fundamentals are strong, consumers are engaged and many seem ready, willing, and able to borrow. Loan growth will almost certainly decline over the next eighteen months – but most credit unions should continue to enjoy decent portfolio increases and healthy earnings results.

Capital Adequacy

- Slow asset growth and higher earnings pushed the Michigan credit union capital ratio up from 11.7% at the start of the third quarter to 12.0% by the end of September. All but two of the state's 224 credit unions are well capitalized with net worth ratios above the 7.0% regulatory threshold level.
- Michigan credit union net worth ratios remain over 11.0% in each of the seven broad asset categories we track – ranging from a low of 11.4% in the “less than \$20 million” and “\$50 to \$100 million” categories to a high of 13.0% in the “\$250 to \$500 million” category.

MI CU NET WORTH RATIO PROFILE (%)

SPECIAL FOCUS

Student Loan Debt: The next financial crisis?

Total student loan debt in the U.S. has reached \$1.5 trillion and is now the second largest component of household debt, surpassing auto loans in just the past decade.

The average graduate (including both undergraduates and graduate students) has nearly \$40,000 in student debt. Yet 43% are underemployed in their first job, unable to find full-time work in their fields of study, and often earning significantly less than expected.

This creates payment challenges for young graduates: In the first quarter of 2018, more than 9% of student loan debt outstanding became newly delinquent—much higher than mortgages, auto loans, and credit card debt.

Combined, these statistics lead many to wonder whether student loan debt might lead to the next financial crisis. Should we be concerned? And what are credit unions doing to address this challenge?

Despite the fact that most student loans originate with the U.S. government, more credit unions are finding ways to support student borrowers through private loans. The percentage of credit unions offering student loans has increased from 7% in 2011 to about 13% today, including roughly 40% of credit unions with more than \$500 million in assets.

Overall 24% of Michigan credit unions now offer student loans and the dollar total of student loans outstanding at these credit unions has increased dramatically to a total of nearly \$185.6 million at the end of September 2018.

Credit union student lending focuses mainly on filling funding gaps for students enrolled in four-year degree programs or graduate school. Credit unions also refinance student loans to lower monthly payments, improve interest rates, remove co-borrowers, and consolidate loans into one monthly payment.

Credit unions considering this line of business don't need to start from scratch. They can partner with one of several credit union service organizations that specialize in student loan products.

Delinquency concerns

Should credit unions be concerned about the rising levels of student loan debt and delinquency rates?

It's important to keep in mind that while student loan debt has grown significantly in recent years, it remains well below mortgage debt, which fueled the financial crisis of 2008 to 2009.

Total household mortgage debt is nearly \$9 trillion—roughly six times higher than outstanding student loan debt—so the latter makes up a much smaller piece of the economy.

What's more, although largely unsecured, 92% of student loans are government loans, and therefore eligible for a wide variety of deferment, forbearance, forgiveness, and repayment options.

This helps keep monthly payments low: The median student loan payment for borrowers ages 20 to 30 years old is only \$203.

MICHIGAN STUDENT LOANS OUTSTANDING (\$ MILLION)

SOURCE: NCUA AND CUNA

And while the percentage of student loans that become newly delinquent is alarmingly high, the percentage of student loans that are 90+ days past-due or are charged-off is significantly lower. In 2017, delinquencies beyond 90 days past-due were only 1.59% of total outstanding student loan balances, and the gross charge-off rate was only 2.04%.

Among credit unions, the figures are even bet-

SPECIAL FOCUS (continued)

ter. NCUA data shows that as of June 2018, 60+ day delinquencies were only 1.03% of total student loans outstanding, and net charge-offs were only 0.17%, the second-lowest charge-off rate after first mortgages.

In Michigan, delinquencies of total student loans outstanding at credit unions have increased slightly since 2016. By September 2018, the 60+ day dollar delinquency rate had increased to 1.74% of total student loans outstanding—still relatively low when compared to the national average. Charge-off rates of student loans at credit unions in Michigan also remain very low at 0.28%

Of course, credit unions' relatively lower delinquency rates might be explained by frequent use of co-borrowers, a focus on loans to four-year universities, and by borrowers being relatively early in their loan terms when payment challenges are less common.

In addition to expanding the range of opportunities for one's future, the financial returns are significant. According to the Bureau of Labor Statistics, the annual earnings of someone with a bachelor's degree is about \$61,000 vs. \$37,000 for someone with only a high-school diploma.

That's roughly \$24,000 more per year for obtaining a bachelor's degree. That translates to approximately \$1 million in additional lifetime earnings.

An advanced degree—such as a master's degree, law degree, or Ph.D.—can lead to about \$44,000 in additional annual earnings, or \$1.8 million more in lifetime earnings.

Therefore, student loans of \$30,000, \$50,000, or even \$100,000 can still be smart investments and relatively affordable over young borrowers' lifetimes.

Workers with college degrees also tend to be better insulated against economic downturns. The current unemployment rate for people with a bachelor's degree or higher education is just 2%, roughly half that of the general population (3.7%).

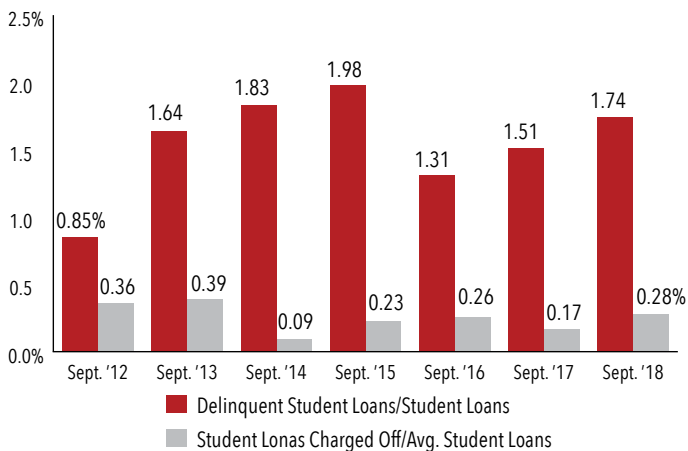

Even at the peak of the financial crisis, the unemployment rate for people with at least a bachelor's degree never went above 5%, compared to more than 15% for people with less than a high-school diploma.

However, these numbers are an average, and there are certainly many young graduates—or people who don't finish college—who are struggling, and unable to find work, or unable to find employment in their area of study.

So, it's important for young people to understand the amount of debt they're taking on and their expected earnings after graduation.

Nonetheless, an investment in education pays off for most people, and many credit unions have found student lending to be a low-risk means of diversifying their loan portfolios while achieving their mission.

MICHIGAN STUDENT LOAN ASSET QUALITY TRENDS (%)

SOURCE: NCUA AND CUNA

A nice niche

Regardless, many credit unions are finding a niche that is paying off and helping young people create better futures for themselves. Despite the increase in tuition costs in recent decades, education remains one of the best investments young people can make.

Earnings & net chargeoffs are annualized quarterly results not seasonally adjusted. Growth rates are not annualized. Delinquency rates are 60+ day dollar delinquencies. Net chargeoffs are dollar chargeoffs net of recoveries. Totals include only credit unions that are released on the NCUA 5300 Call Report file.

*Prior to third quarter 2017, these were reported as member business loans. This change may cause fluctuations from prior cycles.
